

# Password

## OVERVIEW

Password is a general-purpose password management product that ensures user passwords cannot be easily guessed or cracked. As the first line of defense in System i access security, Password is a necessary part of your System i protection.

## THE PASSWORD SOLUTION

The most common method of unauthorized system access is via stolen or easily guessed passwords. Therefore, Password includes user-modifiable dictionaries containing thousands of common words and other text strings that are not suitable for use as passwords. It then validates all passwords that are modified using the CHGPWD command. Users cannot assign any words contained in these dictionaries as passwords.

Password also allows you to manage a variety of password security parameters and maintains a history log of attempts to create passwords. This log can easily be displayed or printed.

With Password, potential intruders now have one more barrier preventing unauthorized access to your system.

GSPHDMNU                                Password                                System: iSecurity
                                           S720

Select one of the following:

Basic Security                            Reporting
 1. Activate Password Validation          61. Display Log
 2. Password and Signon Parameters

Work with Dictionaries                    Related products
11. Primary Language Dictionary          71. Firewall
12. Secondary Language Dictionary        72. Screen
13. Supplemental Dictionary             73. Action User Availability

19. Extract LOCAL words                  Maintenance
                                           81. System Configuration
                                           82. Maintenance Menu

Selection or command
==> █

F3=Exit  F4=Prompt  F9=Retrieve  F12=Cancel
F13=Information Assistant  F16=AS/400 main menu
  
```

Password's main screen provides quick access to password validation, history logs, dictionaries and other features to maintain a secured System i environment.

## KEY FEATURES & BENEFITS

- Two dictionaries available for different languages
- Blocks attempts to use easy-to-guess passwords
- Additional dictionary useful for technical or company-specific terms
- All dictionaries are user-modifiable
- Convenient interface for password and user sign-on parameters
- History log of user attempts to change passwords
- Integrates with other iSecurity products such as Firewall and Screen
