

## **Software Engineering of America forges partnership with Cross Current Corporation.**

Cross Current Corporation is a full service firm specializing in custom software development and systems integration. Cross Current has extensive experience in analyzing, designing, developing, deploying, and integrating enterprise system solutions in e-business and e-government. Their reputation is built on timely and within-budget delivery of high-quality, customized applications and services in banking, IT audits, telecommunications, staffing, healthcare, and the public sector.

SEA and Cross Current have joined forces to provide a complete solution and services for companies looking to protect confidential and intellectual Information and meet compliance and audit regulations.

SEA provides the CWAT solution for Insider Threat Management while Cross Current delivers the consulting and implementation services to deploy CWAT, identify security risks and create the policies to manage those security issues.

Cross Current has in depth experience in the deployment and configuration of CWAT due to the long standing integration of CWAT with their product ccRMC for Enterprise Risk Management.

ccRMC is secured by the CWAT solution to detect and stop, in real-time, the unauthorized transfer of digital assets to protect intellectual property and non-public private information. Over 530 leading enterprises and government agencies trust CWAT to protect their organizations from the Insider Threat. CWAT also addresses the issue of lost or stolen equipment such as laptop computers.
